

PROBLEM

Monkeys attacks on agricultural lands, food industries and farmhouses resulting in huge financial losses that often lead to man-animal conflict

SOLUTION

Kapikaat is Solar powered monkey deterrent that has a bio-acoustic audio system to divert the monkey's away from the affected regions

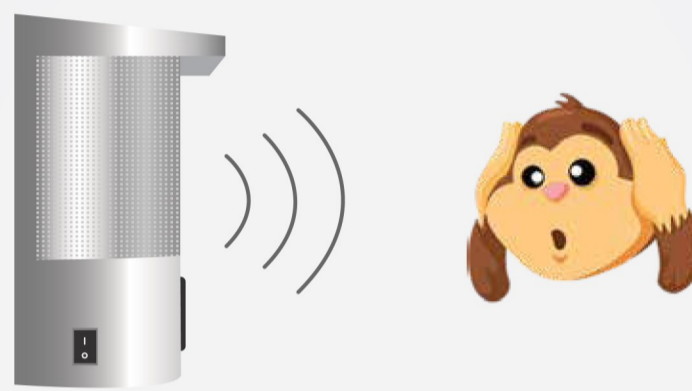

Solar powered system
Simple plug and play device

Sensor based device, that automatically detects the movements of the monkeys around it.

All weatherproof.

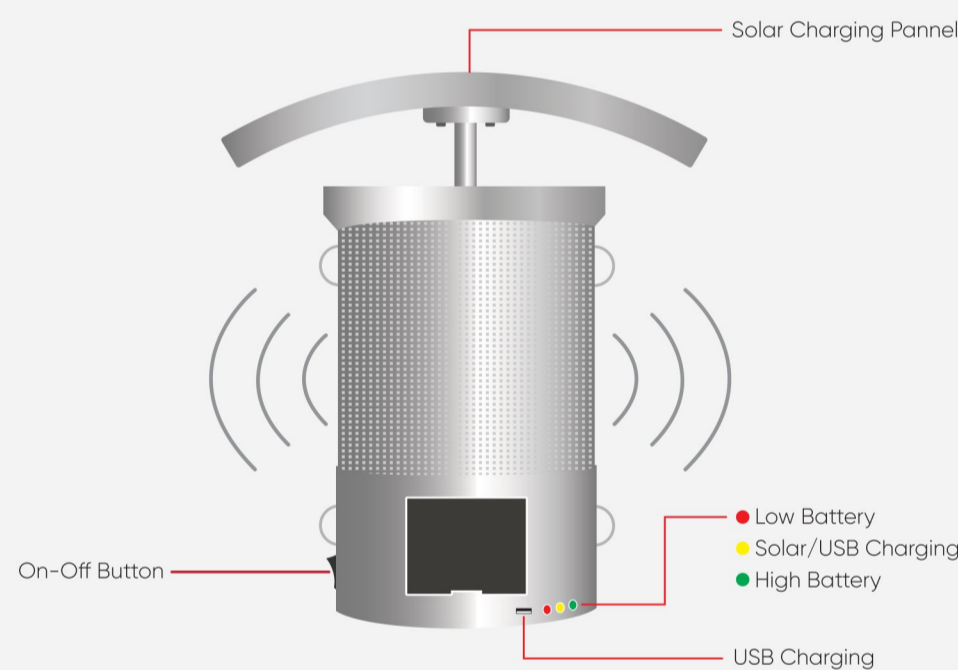

Researched, designed, engineered and build to perfection

Protects agricultural lands, food industries and farmhouses.

HOW TO USE?

- Simply, just fix it on trees or walls using ropes or binding wires
- Switch on for first time
- Leave it to work autonomously sensing the animal movements

FEATURES

- Scientific design of body considering physical and mechanical aspects of sound
- Two powerful Speakers which produces Bio-acoustic sounds
- Microwave sensor for effective sensing and non contactable detection from air
- Dual charging mechanism with solar and micro-USB Green environment friendly Lithium Chemistry batteries
- Harm free audio system which doesnt effect both the animals and mankind

TECHNICAL FEATURES

- Dimensions : 160*125*240mm
- Speakers : 5W.
- No.of speakers : 2
- Angular Range : -120 degrees to + 120 degrees.
- Waterproof
- Charging Time : 5-6 hours
- Effective Microwave sensor detection

OTHER INFORMATION

- Kapikaat has been designed and built on scientific research based on driving monkeys away
- It can be widely used in agricultural and forest areas.
- Simple and effective application that works on the most common species of monkeys like Bonnet Macquaque and Rhesus.
- Maintenance free (*Contact us for the suggestion of number of devices based on the landscape design)
- 1 year limited warranty (*Terms and Conditions applied)
